

Hainan Boao and Hope city Pilot Zone International Medical Policy Promotion Conference*

***Conference will be held in Japanese and Chinese Language**

We would like to express our appreciation for your continued support and patronage.

EPS International is pleased to inform you that the Hainan Boao and Hope city Pilot Zone International Medical Policy Promotion Meeting will be held on September 16, 2021 at the Boao Hope city Medical Tourism Pilot Zone in Hainan Island, China.

In recent years, China has continued to deepen its health care reform and is accelerating its integration with the rest of the world. On February 28, 2013, the State Council of the People's Republic of China approved the establishment of the Boao Hope city International Medical Tourism Pilot Zone in Hainan Province and announced nine independent assistance policies. Prime Minister Li Keqiang called it the "second movement" of the Boao Asia Forum.

In this zone, 162 imported pharmaceuticals and medical devices that are urgently needed clinically, were introduced as "first in China," making it an important channel for cutting-edge international and innovative pharmaceuticals and medical devices to enter the Chinese market. Many of the world's leading pharmaceutical companies, including Johnson & Johnson, Medtronic, Boston Scientific, Pfizer, and Takeda Pharmaceuticals, have formed strategic partnerships with the Hainan Boao and Hope city Pilot Zone.

In April 10, 2020 , the Boao Hope city Rare Disease Clinical Medical Center was established in the Boao Hope city International Medical Tourism Pilot Zone in Hainan Province, China, and is a joint venture between the Hong Kong Medical & Health Care Group (Winhealth), the Hope city Administration Office, and Boao Future Hospital. Their missions are "Bringing cutting-edge, rare disease products to the Chinese market at the same speed as the world, bringing unprecedented hope to patients with rare diseases and their families in China and surrounding countries and regions" and "Become the most comprehensive and advanced scarce disease products and the most advanced scarce disease clinical health centers in China and the region around Southeast Asia".

The objective for this conference is to introduce the overall situation of the medical and pharmaceutical regulatory system, early approval reform, and approved medical policy of the Hope city pilot zone, to help more Japanese companies understand the policy and implementation situation of the Hope city pilot zone, to discuss ways to shorten the time between the early launch of approved drugs and the approval of foreign drugs in China, to support innovative registration methods using real world data, and to build a direct communication channel and platform between Japanese companies and the Hope city administration bureau. We at EPS International know you are very busy, but we would like to invite you to attend.
